

MARKAUDIO SOTA

HEAR OUR DIFFERENCE
Combines Italian flare with British and Asian engineering.

TOZZI TWO

Tozzi Two

Markaudio-Sota loudspeakers aren't conventional.
The music is natural, detailed and voices sound real.
You can truly Hear Our Difference.

Tozzi Two is an ultra-high-end, single-driver desktop loudspeaker. It incorporates the most advanced all-range driver technology on the market with a sub-compact enclosure developed using the latest in industrial design and computer numerical control (CNC) machining. Tozzi Two, in finished quality and performance, is a purist high-end compact loudspeaker for the discerning customer.

> Key features include:

- State-of-the-art 50mm Sota 5A variant single-suspension all-range driver
- High-rigidity enclosure milled from solid aerospace-grade aluminium and composite sub-assemblies
- Two high-grade finishes
- Machined waveguide front baffle
- Base includes mounting for \varnothing 1/4" thread tripods or similar stands

> Styling

Tozzi Two was developed by Mark Fenlon, the British engineer responsible for the internationally acclaimed Alpair loudspeaker drive units. Mark's concept was to develop a high-end sub-compact loudspeaker to partner our flagship Viotti One standmount, using precision-machined aluminium and custom composite sub-structures. The size and styling echoes compact high-end cameras and Tozzi Two can be mounted on any standard camera or photo-light tripod. It is equally well suited to sitting on a desktop, bookshelf or wall-bracket, making it a great lifestyle icon in modern living spaces. Two luxurious choices of finish are available, displaying the precision-machined enclosure to best effect:

- **Brush Stipple Rose Alloy (with grey leatherette centre)**
- **Brush Stipple Grey Alloy (with grey leatherette centre)**

> The Drive Units

Designed by Mark Fenlon, this state-of-the-art driver is a single-suspension variation of the Sota 5. The sound has superb clarity and detail, with a clean, precise and phase-accurate balance. A long stroke helps avoid excess compression. Range is exceptional for a sub-compact loudspeaker, stretching from upper bass notes to well beyond the upper limit of human hearing. The advanced alloy cone has a very shallow profile. With the waveguide machined into the front panel, it has excellent dispersion of sound energy into the room. No filter is used; the output of the amplifier goes direct to the driver.

> Cabinet Engineering

Tozzi Two is constructed from just three sub-structures. The front and rear sections are individually CNC-machined from solid blocks of aerospace-grade aluminium, aligned and fixed to the central structure, a composite of Acrylonitrile-Butadiene-Styrene with internal reinforcing fibres. These heavy aluminium billets, with the signature Tozzi waveguide machined into the front panel, give the custom single-suspension drive unit an exceptionally stable structure to work with, maximising efficiency and performance.

Specifications

- 1 x Alpair 5 all-range driver
- 90Hz - 27KHz anechoic
- 84dB 1w @ 1m
- Dimensions: 200 x 126 x 200 mm

- 15w Nominal (30w peak).
High quality amplification is highly recommended.
Please see our technical page for more in-depth advice
- Weight (each): 1.96 Kg
